

Microplastic Polymer Analysis Report

Report ID	eb982342-1f86-496f-a2f3-a04273d43f97
Generated On	19 May 2026 14:21
Status	Completed
Sample ID	FTIR-4941

Prediction Results

Detected Polymer	HDPE
Confidence Score	0.40%
Model Used	base_model

FTIR Spectral Analysis

- 2915 cm^{-1} → CH_2 asymmetric stretching
- 1470 cm^{-1} → CH_2 bending

Confidence Interpretation

■■■■■■■■■■ 0.40%

AI Generated Summary

The analyzed sample was identified as HDPE with a confidence score of 0.40%. The FTIR spectral characteristics strongly support the presence of HDPE polymer chains. The detected functional groups and absorption bands are

consistent with known spectral signatures of HDPE. The analysis indicates a reliable classification suitable for environmental and material identification studies.
