

Microplastic Polymer Analysis Report

Report ID	09a6da78-ddd5-4c07-a2ab-8cf67f8422d3
Generated On	18 May 2026 18:16
Status	Completed
Sample ID	FTIR-8028

Prediction Results

Detected Polymer	HDPE
Confidence Score	0.94%
Model Used	finetuned_model

FTIR Spectral Analysis

- 2915 cm^{-1} → CH asymmetric stretching
- 1470 cm^{-1} → CH bending

Confidence Interpretation

■■■■■■■■■■ 0.94%

AI Generated Summary

The analyzed sample was identified as HDPE with a confidence score of 0.94%. The FTIR spectral characteristics strongly support the presence of HDPE polymer chains. The detected functional groups and absorption bands are

consistent with known spectral signatures of HDPE. The analysis indicates a reliable classification suitable for environmental and material identification studies.
